High-End Software & Security Engineering

AdNovum is a leading full-service provider of software and security systems for customers with highly demanding technical and commercial requirements. Our custom-made solutions are designed to the highest quality standards in the tradition of Swiss precision engineering.

AdNovum offers a full range of services to implement and maintain software and security solutions with high functional and technical requirements. For years, renowned organizations from diverse industries and the public sector have trusted the strength of AdNovum's IT competence, services, and products.

AdNovum was founded in 1988. Headquartered in Zurich, the company has offices in Singapore, Bern, and Budapest and employs 260 people, 70% of whom are software engineers with a master's degree.

Services

AdNovum's services range from consulting, business analysis, requirements engineering, development, testing and integration to support, maintenance, and operations. Our four service areas Application Development & Integration, Security Engineering, IT Consulting and Application Management complement each other. Project teams are individually assembled from our staff of highly trained professionals in all four areas.

Solutions

AdNovum's solutions combine standard products of renowned vendors with open-source software and open standards. Modular in nature, they seamlessly blend in with existing system environments. New components and technologies can be easily integrated, and the solutions rapidly adjusted to changing business requirements. This results in sustainable high-performance reference projects such as:

- Business & Government Applications
- ECM & E-Dossier
- Enterprise Portals
- Logistics & ERP
- IT Security
