The AdNovum group specializes in the development of highly secure software solutions for Swiss financial institutions, government agencies, and other organizations that manage highly sensitive data. AdNovum's engineers have implemented an entire series of large Java applications and single sign-on solutions for such customers.

For our continually growing subsidiary AdNovum Hungary Kft in Budapest we are currently recruiting

Software Engineers

with a keen interest in Java EE application development in a Unix environment and in working with relational databases. English required, German an asset.

Depending on your interests and qualifications, your tasks will include:

- development of web applications
- database modelling
- integration of new components and technologies within existing application and service infrastructures

Requirements

For this challenging task, you should have:

- a university degree in computer science or electrical engineering
- min. 2 years of experience in Java EE application development (C++ knowledge is an advantage)
- working knowledge of relational databases
- sufficient English language skills to work in an English-speaking team

We offer an attractive portfolio of challenging software development tasks and an inspiring working environment in Budapest. Start date: as soon as possible.

If you have substantial experience in Java software development and are interested in working for a dynamic Swiss software engineering company, please submit your written application in English to jobs@adnovum.hu or by mail to:

AdNovum Hungary Kft.
